NOTE: This is a 'vorking draft' sequence. It currently consists of 74 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (bases 1 to 168280)

between neighboring data submissions. clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap This sequence may not represent the entire insert of this

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction This sequence was finished as follows unless otherwise noted:

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998). An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) The clone sequenced to the left is RP11-261J9; the clone sequenced to the right is RP11-383I5. Actual start of this clone is at base position 1 of RP11-389E16; actual end is at base position 176741 of NEIGHBORING SEQUENCE INFORMATION:

There are polymorphic base pair differences the clone RP11-389E16 and RP11-261J9.
Location/Qualifiers in the overlap between

position 1 of RP11-389E16.

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

ARF91858-AAF91929 represent cDNAs corresponding to 52 human secreted cc AAB87414-AAB87454 represent human secreted protein fragments. The genes can defer corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene cherapy. Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the cc amount of the new genes. Specific uses are described for each of the cc series, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of c proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, callergies, neurological disorders (e.g., Alzheimer's disease, cancer stinding and evelopmental conditions. The proliferation of c sunburn, to maintain organs before transplantation, to gratinary tissues, to regenerate tissues, to identify their constants, and infections. The proteins can also be used to aid wound the primary tissues, to regenerate tissues, to identify their constants specific for a protein of the invention can be used in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked immunosasays (ELISA). The present sequence represents a human cc secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                           4974
                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic actis and encoded polypeptides are useful: to assess if a patient; is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be

                                                                                                                                                                                The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclarosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                     The present invention relates to a recombinant DNA construct of a (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the constructs are useful for a construct of a constru
                                                                                                                                                                                                                    Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors fithe construction of transgenic plant and animal cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WO200055325-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Arabidopsis thaliana

                                            can be used for antisense therapy. Methods and products from the present invention can be used for identifying and/or classifying cancerous cells present in a human tumour, particularly in solid tumours, e.g. carcinomas and sarcomas, e.g. breast or colon cancers. The cDNA clones can be used for developing agents for the diagnosis and treatment of

                                                                            CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end complementary to a complementary to the CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence complementary to a CC coligonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC particularly full-length cDNAs. The primers are also useful for the CC coll-length cDNAs. The primers allow obtaining of the full-length CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB35893 represent human cand sequences; AAB92446 to CC CAB95893 represent human amino acid sequences; AAB92446 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-AUG-1999;

                                                                  (I) and (II) are useful for the development of vaccines against p. falciparum infection. (I) and polyvlonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with p. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins can aid the identification of drugs to treat or prevent p. falciparum infection, or they can be used to identify drug resistance in p. falciparum. Sequencing of the plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expa our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1413
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1293
vaccine and drug development. Parasite resistance to drugs and resistance to insecticides have led to a resurgence of malaria parts of the world, and there is a pressing need for vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Proteins encoded by chromosome 2 of the human malarial Plasmodium falciparum, useful as antimalarial vaccines diagnosis of P.falciparum infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Plasmodium falciparum; antimalaria; malaria;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                       can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arterioscierosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                          genes which are modified by the methylation of cytosines. The scan be used in the diagnosis and treatment of immune system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neuroprotective; anti-HIV; anticonvulsant; ophthalmological; antirheumatLc; antiarthritic; antidabetic; antipsoriatic; antinflammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease;
                                                                                                                                                       Claim 1;
                                                                                                                                                                                               Nucleic acid comprising fragment of chemically modified for diagnosis and treatment of diseases associated with
                                                                                                                                                                                                                                                                                                                              30-JUN-2000; 2000DE-1032529

           Sposition to uracil or another base with hybridisation behaviour dissimilar to cytosine, to enable analysis of cytosine methylations. The DNA sequences, oligomers (or sets/arrays) and method are useful in the diagnosis of diseases (or predisposition to diseases) associated with gene regulation and in therapy of such diseases, by enabling analysis of the cytosine methylation patterns of such genes kits are provided. They are especially useful in diagnosis and therapy of e.g. severe combined immunodeficiency disease, cardia disorders, haemophilia, solid tumours and cancer. Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen syndrome, renal disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-APR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                        (2) a method for the production of hydrogen by culturing the above blue-green alga under light irradiation; (3) a method for the production of hydrogen by culturing the above blue-green alga anaerobically and then under light irradiation; (4) a method for the production of hydrogen by reacting the above blue-green alga with an electron receptor; and (5) a method for the production of hydrogen by culturing the above blue-green alga anaerobically and then reacting it with an electron receptor. The method is mild to environment. The present sequence represents a nucleotide sequence from an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A method has been developed for the preparation of hydrogenase in whice a blue-green alga introduced by a recombinant vector containing a heterologous hydrogenase gene is cultured in a medium to form and accumulate hydrogenase in the microbe body. Also claimed are: (1) a blue-green alga introduced by a recombinant vector containing a gene having a Shine-Dalgarno sequence consisting of AAGGAA upstream of the hydrogenase structural gene derived from a Clostridium genus microbe; (2) a method for the production of hydrogen by culturing the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Clostridium; hy
Shine-Dalgarno;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Preparation of heterologous hydrogenase in blue-green algae for production of hydrogen and is environmentally friendly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Вb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                     Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be
                             ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative discreters, graft-versus-host disease aging, glomerular disease, Lewy body disease, arthritis, arthritis, solid tumours and cancers.
                                                                                                                                                                                                                                                                                                                                                        Designing primers and probes for analysing diseases associated with cytosine methylation state e.g. arthritis, cancer, aging, arteriosclerosis comprising fragments of chemically modified genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01ek
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            15-MAR-2000; 2000DE-1013847.

        sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH36742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                              The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

                                                                                                                                                                                                                              01ek
                                                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and
                                                                                                                                                 Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation
                                                                                                                                                                                                                                                                                                                                                                                                                                                 antlinflammatory; cancer; eye disease; arteriosclerosis; anaemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-489479."
